

BSTLN91-0120

1-20 GHz Low-Noise Amplifier

Data Sheet

I. Product Introduction

BSTLN91-0120 is a high-performance low-noise amplifier chip with a frequency range of 1 to 20 GHz, a small-signal gain of 15.5 dB, a noise figure of 1.6 dB, and an output 1dB compression power of 16 dBm.

The chip uses on-chip through-hole metallization technology to ensure good grounding, no additional grounding measures are required, and it is simple and convenient to use.

The back side is metallized and suitable for eutectic sintering or conductive adhesive bonding.

II. Key Technical Indicators

- | | |
|---------------------------------|--------------------------|
| • Frequency range: | 1-20GHz |
| • Small signal gain: | 15.5dB |
| • Output 1dB compression power: | 16dBm |
| • Noise figure: | 1.6dB |
| • Input return loss: | 15dB |
| • Output return loss: | 16dB |
| • Power supply: | +5V@38mA |
| • Chip size: | 1.60mm × 1.20mm × 0.10mm |

SERIAL NUMBER	PORT NAME	DEFINITION	SIGNAL OR VOLTAGE
1	RFIN	RF signal input terminal, no external DC blocking capacitor required	RF
2	RFOUT	RF signal output terminal, no external DC blocking capacitor required	RF
3	Vd	The LNA drain is positive, so it is recommended to add a 100pF capacitor.	+5V

IX. Precautions

- Assemble and use in a clean environment;
- GaAs material is very brittle and the chip surface is easily damaged (do not touch the surface), so you must be careful when using it;
- Use two bonding wires (25μm diameter gold wire) for input and output. Keep the bonding wires as short as possible and no longer than 300μm;
- The sintering temperature should not exceed 300°C and the sintering time should be as short as possible, not exceeding 30 seconds;
- This product is an electrostatic sensitive device, please be careful to prevent static electricity during storage and use;
- Store in a dry, nitrogen environment;
- Do not attempt to clean the chip surface with dry or wet chemical methods.
